

# COVID-19 Cases in Alexis Nakota Sioux, Alberta

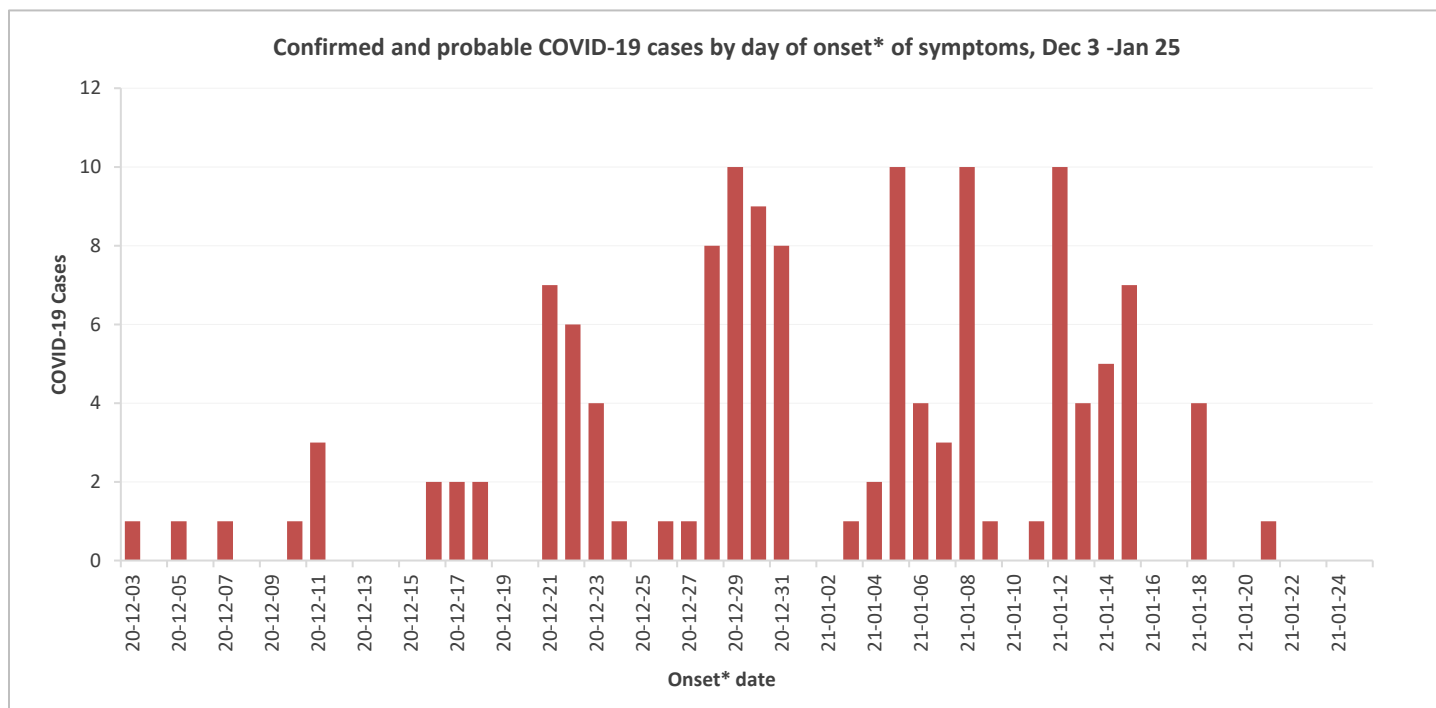

Information as of end of day, January 25, 2021

Source: Community Reports to FNIHB-AB & FNIHB COVID-19 ER System via Synergy in Action (January 26, 2021)

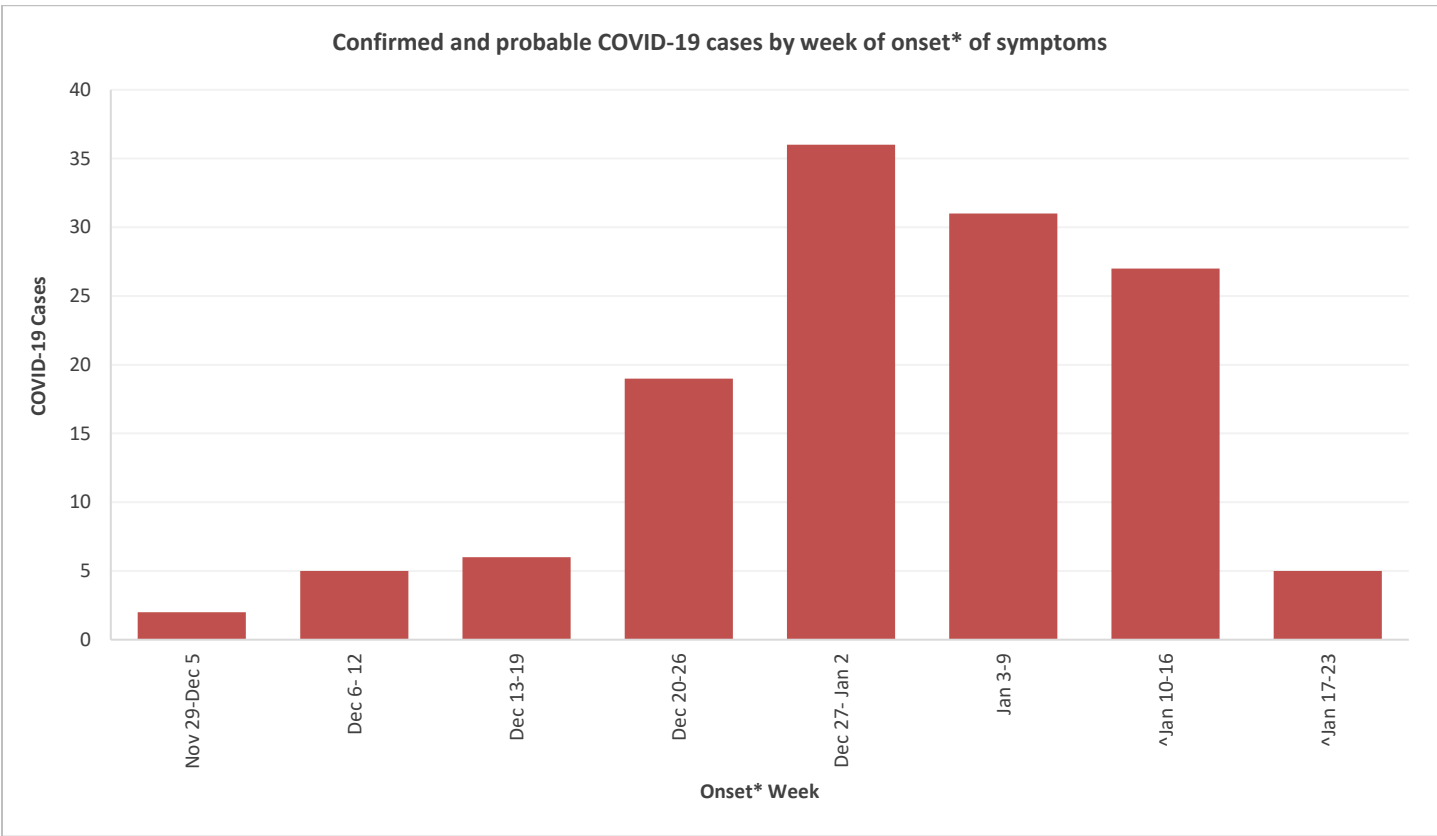

## Highlights

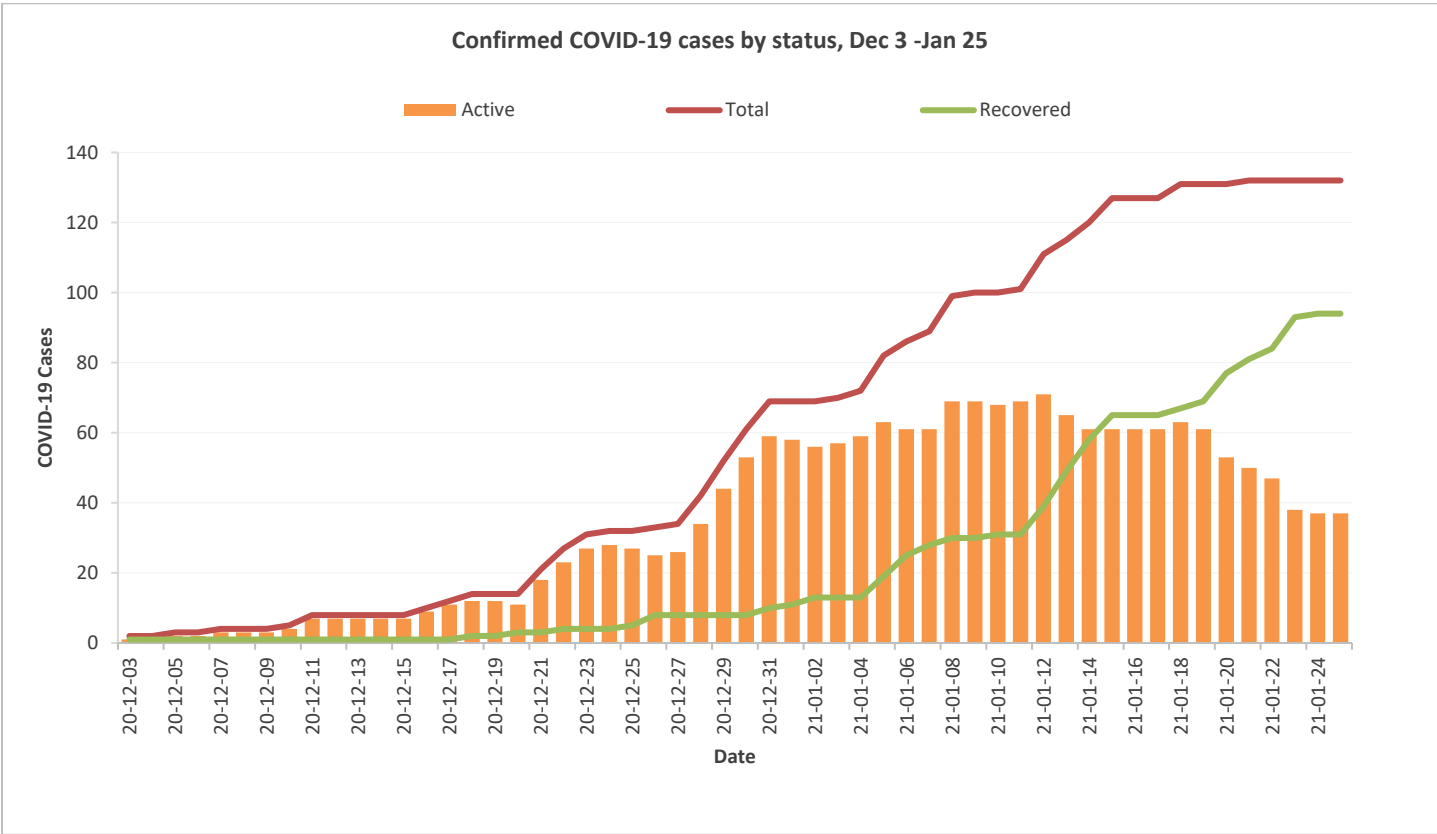

NOTE: FNIHB-AB uses Alberta Health surveillance definition of active and recovered cases. The surveillance definition of active and recovered cases is used to try and understand the number of active cases in the population and it is not related to clinical management of cases. A confirmed case is assumed to be recovered 14 days after the specimen collection date. A probable case is assumed to be recovered 14 days after the date the case was reported to FNIHB-AB. A hospitalized case is assumed to be recovered when their symptoms have resolved based on case follow-up, or 10 days after being discharged from hospital.

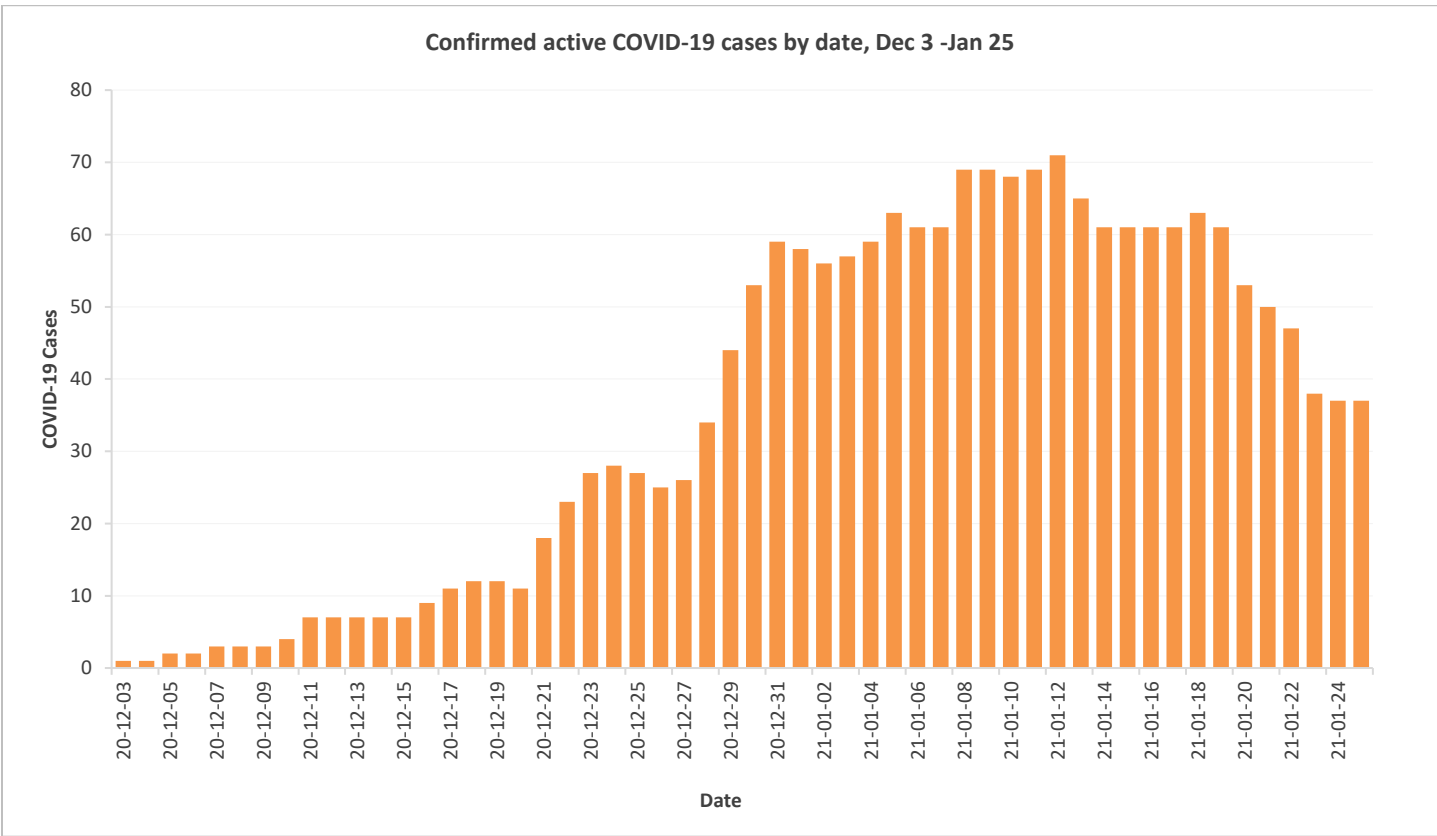

Note: \*Onset date is the earliest of the “date of onset of symptoms” and “specimen collection date”. Exclude 1 case that occurred before December 3, 2020.

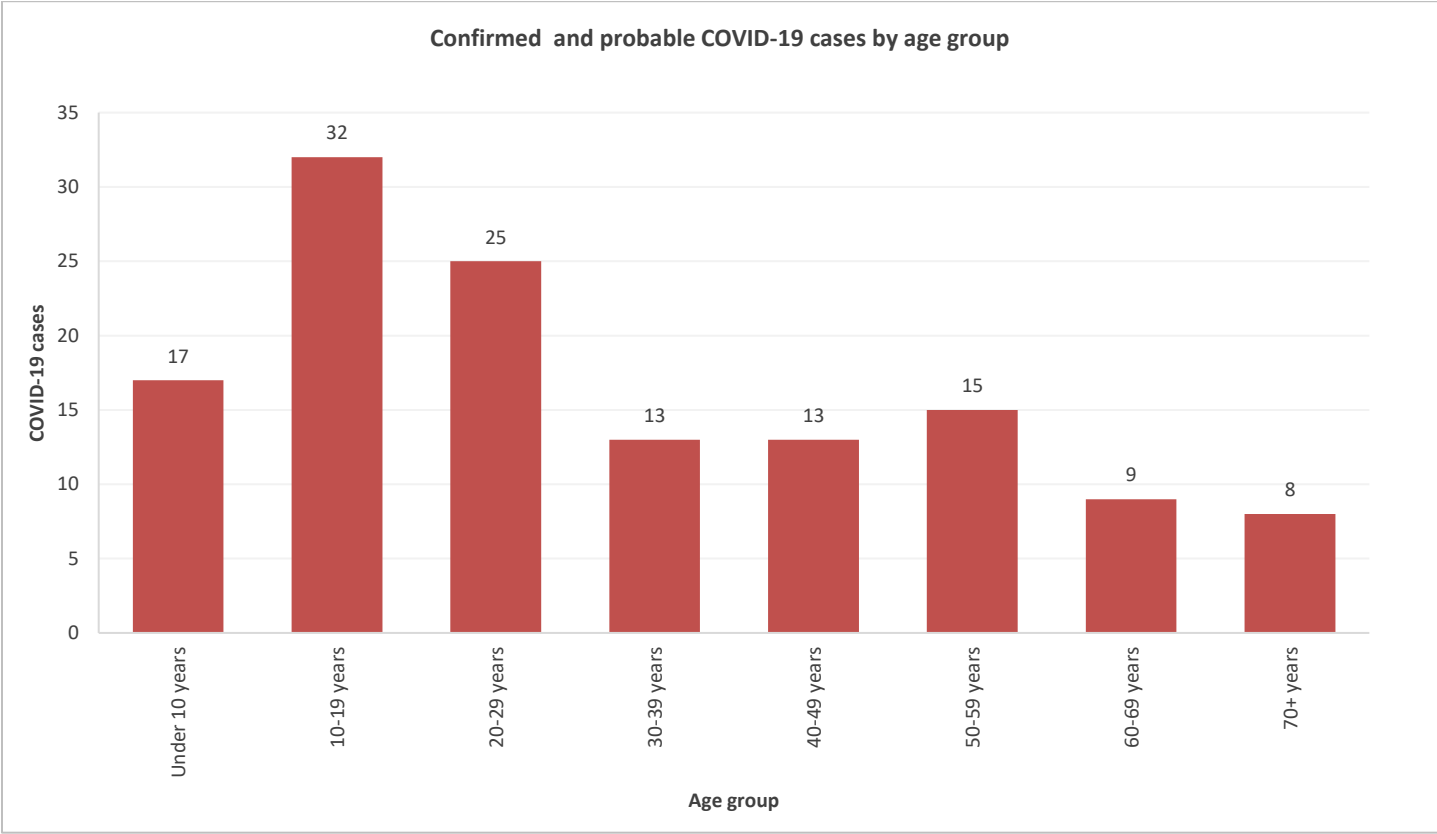

Note: ^Data may be incomplete due to late receipt of lab reports. Exclude 1 case that occurred before December 3, 2020.

Note: Exclude 1 case that occurred before December 3, 2020.

## Severe Outcomes

**11**

Hospitalized cases ever  
(4 males)

**3**

ICU cases ever

**8.3** per 100  
COVID cases

Hospitalization rate

**2.3** per 100  
COVID cases

ICU Rate

**0.8** per 100  
COVID cases

Case Fatality rate

**60** years  
(range:22-82)

Average age of cases  
hospitalized
